What makes us different?

1. Quality finish every time.
2. Built to last the test of time.
3. Customer focused.

We put true professionalism & expertise first which allows us to deliver a premium stainless steel handrail & balustrade service to the market.

ABOUT US

"Our promise is to provide a product that is safe, looks great, meets all the current regulation and stands the test of time."

It's Geelong Handrails & Balustrades goal is to become the No.1 supplier of stainless steel handrail & balustrade products to commercial & residential clients in the marketplace. We believe Stainless Steel is the superior product in the market due to its strength & longevity so its our goal to help make the pricing more competitive for our clients using modern technology & processes.

By using stainless steel, this allows us to offer impressive lead times for custom fully welded systems while also providing a sturdy & very aesthetic finish with a long expiration date.

Key Benefits:

Fully Welded - No bolts to rattle loose over time, leaving you with a faulty product.

Longevity - The material has superior longevity qualities. No need to be concerned if finish is scratched or chipped. Simply touch up or polish.

Smooth Finish - No need to worry about sharp edges or burrs left from galvanisation.

Finishes Available - Unique stainless steel polished & satin finish as well as the ability for powder coat.

Aesthetic - No bulky connections, aesthetically pleasing streamline finish.

Speed to market - Due to not having additional finishing processes applied to the product, we can offer more attractive lead times to meet deadlines.

Comparable pricing - Due to off the shelf components, the price to manufacture can be comparable depending on the product.

We offer a full service including site measure & consultation, shop drawings, manufacture installation or supply only.

We want to be able to assist to our clients and give them the confidence we will provide a reliable worry free service time and time again.

COMMERCIAL HANDRAILS

All of our Commercial Handrails are manufactured using 316 Stainless Steel with a choice of different profiles, colours and finishes. Designed with safety, longevity and compliance in mind. All of our handrails have customisable terminations and can be finished in Stainless Steel or Powder Coated to your colour preference.

Our DDA Handrails are up to date with the current Disability Discrimination Act. These handrails are ideal for use in schools, childcare centres and public use spaces. These handrails feature 180 degree elbows or returns to the floor. They also require a wheelchair kick rail on when used on ramps.

 - 2 x Mini Posts per glass panel
 - 4 x Fixings per Mini Post
 - Finished Balustrade height sits 1040mm AFFL
 - Handrail to sit 50mm off glass

FINISHES AVAILABLE

We offer both stainless steel finishes and powder coated finish for colour applications.

Stainless Finshes:

Satin Finish - The satin finish offers a brushed polished consistent look, it has less gloss & shine. Polished to a No.4 finish. Not ideal for Coastal Areas, great for indoor and commercial projects. May require some cleaning maintenance.

Polished Finish - The polished finish offers mirror consistent look, it is high gloss & shine. Polished to a 320 - 600 Grit finish. Ideal for Coastal & higher salinity areas. Low maintenance required, little to no tea staining.

Powder Coat Finish:

We offer the Dulux Duralloy Solid Color Range:

LOCALLY MANUFACTURED

All of our materials are sourced from suppliers in the region and our products are manufactured at our factory in South Geelong, Victoria 3220

STREAMLINED PROCESS

We understand this is a relatively small but important component of the build so we take pride in making the process as smooth & effective as possible for our clients.

1. Client Consultation

Either in person or via email, we'll establish what it is you require and if it's something we can assist with.

2. Design Selection

Selection of the design the client requires for their project with consultation on compliance and finishing options.

3. Provide Proposal

Submission of proposal indicating the cost of the project and a description of scope of works.

6. Shop Drawings

Production of shop drawings for manufacturing & installation set out. Additional client approval if requested by client.

5. Design Approval

Confirmation with client of the specifications of the product to gain confirmation prior to producing shop drawings.

4. Site Measure

An on-site visit to measure the proposed area for new handrails & balustrades. Measurements to be provided for CAD drawings.

7. Manufacture

The manufacturing of the product as per client's requests. Material Finishes & Packaging if required.

8. Site Delivery

If included and a supply only project, we will deliver to site. If we are installing, we will deliver with installation team on the day of installation.

9. Installation

Installation of product by our team of handrail specialists. If client is installing themselves, installation drawings and support provided.

SUPPLY ONLY

We offer the option for supply only with our products. Utilising internal slip joiners & connection plates, we provide the product in fully welded sections, ready to be fixed down. We deliver the same process right through to delivery to site.

This gives our clients the option to save on installation costs or use our products in areas we don't offer installation. Ask for the supply only price to be itemised on you're next quote.

LED HANDRAILS

We can offer LED provisions for most of our handrails. Utilising slotted top rails or LED light cut outs, we can provide our handrails with the ability for LED electrical components to be installed after installation.

We give our clients the comfort knowing the electrical installation will be a smooth process as the handrails have been manufactured correctly due to our experience with LED handrail installations. Ask for the LED option to be added to your next quotation.

The sizes we offer LED allowances on are 50.8mm Round, 38.1mm Round & 50 x 25mm. Our handrails will come with a 15 x 15mm slot which allows for a LED channel to be installed. We will also provide holes for the wire to pass through at pre-selected points as well as run a drag wire through when installing to help with the electrical installation.

CUSTOM PROJECTS

We provide service for custom stainless steel Handrail & Balustrade projects. We look at this on a project by project basis depending on our current process capability and schedule.

Feel free to send your next custom stainless steel project in and we'll be happy to take a look and if we can help, we'll provide our competitive pricing on the project.
